**September Quality Report  
Immunizations 2016**

**The reporting time frame was 9.2015- 8.2016. All records for patients 3 years of age during the reporting period were examined for each provider for completeness of immunizations per UDS. Charts were reviewed for documentation in scanned documents and/or under the immunization tab in EHR.**

**Providers who did not have patients aged 3 years in the reporting time frame were not included in the reporting.**

**Any chart which had documentation stating that the parent refused immunizations for the child were excluded from the study. All sites which had comparative results from last year showed improvement. The overall site average increased by 22% from last year.**
